

# SRD-X

## portable adaptor for earspeakers

The SRD-X portable adaptor is designed to plug into standard headphone jacks for easy hook-up. You can now connect this energizer directly to your tape deck, FM tuner, portable radio/cassette recorder or amplifier headphone jack. And it operates from AC power (AC adaptor included) or "C" cell batteries. So you can take your STAX electrostatic earspeaker out of your listening room to enjoy music outdoors or to monitor on-the-spot recordings.

Any of STAX earspeakers can be connected to the SRD-X. A gain control is mounted on the front of the SRD-X adaptor so it can be used with unattenuated equipments.

With manganese batteries you get 25 hours of continuous operation below rated distortion (0.03%) and 75 hours with alkaline batteries.

### Specifications

Frequency Response	20 Hz ~ 20 KHz
Distortion	0.03% (1 KHz)
Input Level	100 mV
Max. Output Voltage	210V
